CyFlow® Counter

Healthcare | Immunology

Portable FCM System for Routine HIV/AIDS Monitoring of Adult and Pediatric Patients
More than 35 Years of Experience and Professional Expertise

Partec – pioneer in Flow Cytometry since 1968 – responds to these requirements with the new generation of Windows™ XP based CyFlow® and PAS™ FCM systems featuring innovative computer controlled flow systems, modular optical systems with advanced PMTs for all optical channels, most modern computer and digital electronic technologies including fast and precise 16 bit ADC converters and realtime data acquisition and display.

New sophisticated applications and increasing requirements for reliable results in research and clinical routine within the shortest possible time - The challenge for flow cytometry instrumentation, automation, and software.

A well-established network of subsidiaries and distributors in more than 60 countries worldwide characterizes Partec’s commitment to the increasing focus and need for global access to Flow Cytometry instrumentation and application support:

CyFlow® Counter FCM System

- ultracompact and fully equipped mobile/portable instrument
- dimensions [cm]: L 30 x H 35 x D 38
- highest stability/robustness and highest precision
- single platform True Volumetric Absolute Counting (TVAC)
- high fluorescence sensitivity < 50 MESF (PE)
- power connection: regular 100/240 V AC or car battery and solar panels (12 V DC)
- set-up time: < 5 minutes
- volumetric absolute counting of CD4, CD45, CD8, CD3
- price per CD4 test: EUR 1.75
  - price per CD4% test: EUR 2.50
- capacity: up to 250 CD4 or CD4% tests per day
- price for CyFlow® Counter including 1000 CD4 tests: EUR 16,850
The ultracompact and portable CyFlow® Counter provides most accurate and uniquely affordable absolute cell counts for HIV/AIDS monitoring both, for adults and children.

---

I. Compact and Affordable

The CyFlow® Counter is a fully equipped portable ultracompact desktop flow cytometer dedicated to routine CD4 counting (as well as CD8, CD3, CD45 counting). With its small size and its highest robustness the CyFlow® Counter is easy to place even in small hospitals and laboratories in remote and resource-poor areas such as on provincial and district levels. This enables decentralized use close to the patients. It is the perfect device in HIV monitoring to replace more expensive and highly service demanding large flow cytometers and CD4 counters. With the new alignFree™ technology, optical alignment and adjustment as known from the conventional systems are not required anymore, making the CyFlow® Counter the first and only real “plug&play” CD4 counter. A dramatical cut-down of the costs per CD4 count and the running costs are therefore achieved. Service and maintenance requirements are reduced to a negligible minimum.

I. High Precision

The green solid state laser of the CyFlow® Counter shows a unique short and long term stability superior to water and air cooled gas lasers. Highest precision and most accurate T-cell enumeration are maintained by the extraordinary long lifetime of solid state lasers.

The unique Partec flow cuvette is the heart of the CyFlow® Counter, ensuring that cells cross the excitation light with best possible precision.

The design of the flow cuvette incorporates more than 35 years of experience in handling fluids with sub-micrometer and nanoliter precision. Thanks to the optical and mechanical precision of the flow cuvette, superior results are guaranteed for all parameters. The sample is transported with help of a computer controlled digital syringe pump, part of a virtually cross-contamination-free fluid system.

The True Volumetric Absolute Counting (TVAC) is a unique feature of all Partec Flow Cytometers, offering highest absolute counting precision and accuracy.

The CyFlow® Counter analyses concentrations of any particle or cell subpopulations of interest using True Volumetric Absolute Counting. This unique method is solely based on the fundamental definition of absolute counting respectively the particle concentration \( c \) which is equal to the counted number \( N \) of particles [e.g. cells] in a given volume \( V \), \( c = N / V \). In the CyFlow® Counter, the volume is measured directly by mechanical means, rather than by calibration with expensive beads with a—sometimes doubtful—“given” nominal concentration. Thus, the precision of volume measurement is defined by a fixed mechanical design, eliminating any errors related to varying bead concentrations or bead aggregation. The CyFlow® Counter allows the analysis of a fixed volume as defined by the distance between two platinum electrodes reaching into the sample tube with a given diameter. Alternatively, a well defined volume of free choice involving the digital sample speed control can be used. Benefits of True Volumetric Absolute Counting:

- digital volumetric precision by mechanical design: CV< 2 %
- no errors related to calibration
- no additional time and preparation steps for reference beads or haematology reference count
- no expenses for calibration beads
- no separate haematology counter required
Get your accurate and precise counting results from the CyFlow® Counter for routine HIV/AIDS patient monitoring within shortest possible time.

The CyFlow® Counter is designed to perform routine cell analysis, in particular true volumetric absolute counting of cells, to be used in routine HIV/AIDS follow-up diagnostic.

A breakthrough for the routine application in HIV/AIDS monitoring is reached by the development of an ultimately easy-to-perform 1-step blood preparation protocol. This protocol does not need any critical pipetting step. Therefore, the main source of error is eliminated.

The results are directly displayed in terms of absolute cell number per microliter blood sample.

Automatic print-out of the cell counting results including cell distribution histograms as additional built-in quality control.

CD4, CD8, CD3 absolute cell counts from the same blood sample showing the excellent separation from the monocytes and accurate results:

- CD4: 1210 cells/µl
- CD8: 519 cells/µl
- CD3: 1727 cells/µl
The Partec CyFlow® Counter is your complete solution for routine immunophenotyping.

Computer system and software

Built-in PC-compatible computer and 10.4” Active Matrix TFT LCD Colour screen with 640x480 pixels. Real time data acquisition, analysis, and storage with 4096 channels. Histogram display with 512 channel resolution in real time.

All data are automatically stored on built-in memory. Data can be transferred to other computers via Ethernet connection. The CA3 software provides instrument control, data acquisition, data analysis, and True Volumetric Absolute Counting. Concentration results are updated during acquisition (syringe counting method). Gates can be defined by cursors. Automatic peak analysis. Optionally available:

- DPAC for Windows, the complete one parameter data evaluation software for numerical peak analysis and data transfer to other desktop publishing systems
- FloMax® for Windows™ multiparameter analysis software for complete analysis of FCS data in one single Windows package
- Partec Report software for automatic clinical report generation

CyFlow® Counter FCM System

<table>
<thead>
<tr>
<th>GENERAL</th>
</tr>
</thead>
</table>
The CyFlow® Counter is a fully-equipped portable / desktop flow cytometer with laser excitation in green. It analyses up to three optical parameters (SSC and 2 fluorosciences channels) plus time parameter. It performs both fluorescence analysis and true volumetric absolute cell counting without the need for reference beads.

<table>
<thead>
<tr>
<th>LIGHT SOURCES</th>
</tr>
</thead>
</table>
The CyFlow® Counter is equipped with a modern and powerful 532 nm green solid state laser light source.

<table>
<thead>
<tr>
<th>OPTICS</th>
</tr>
